I'm completely in on this series, but I've got to be honest, a couple of the books aren't so great. But this one is. The spirit and information and adventure of the first books is back in this one. Well worth the read. Off to the next book in the series.

Another great book in this series. It mostly focuses on the Broome family and ocean going ships (I know, you got that from the title). Touches on events such as Krakatoa as well as the politics between Britain, US and Germany in Indonesia.

In the series, I have found some of the books more compelling than others. This is one of my favorites. As in each book of the series, there are a couple scoundrels that a reader just loves to hate, nice historical references to world events, and the continuation of families we've met time and time again throughout the series.

the description of the volcano eruption in this book is compelling. It felt like the tidal waves were washing over you.
