Melissa Hayden says

A continuation of stories in a world devastated from the Nazi's and in need of heroes no matter how small. Some survive, some don't make it. And we meet new heroes as we go. This is like watching a tv series with seasons ending. Good thing, the next season is out!

****FULL REVIEW****

The world is a mess. Things are not working out well for ECHO. There are those in trouble. Their Meta-hero numbers are dwindling. No help seems to be coming from ECHO to the humans in the damaged areas. And no help to ECHO either. Nazi's are still around and ECHO is at it's low.

The wreckage of the world has people taking advantage of the depleted protection forces. Through the new and old operatives ECHO is working to recruit. They need more Meta's and they are flipping old stones to find the ones hidden away, and retired. There is another group, the Black Snakes, out there doing the same. The Black Snakes are trying to get to all the META's and turn them to their side.

New authors have come into the fold, and along with them new characters join the cast. This brings a diversity to the world and fresh ideas. Something different for the current characters to battle. We get to see the new recruits and operatives in action. We see what the characters are made of in the moment of an attack or injury, giving us a look at their powers, actions, and glimpses of their past.

We get to see magic by Vicky! I love seeing her yield her ability. This is a great blend with the superheroes. Vicky is a superhero but...she's something else, something more. Magic is mysterious in this world. Kind of the element kept hidden as it's feared or looked at as bad. We learn a bit more about it through Vicky.

The CCCP has received more "employees" from Russia. However we see through John Murdock's eyes that the CCCP, run by a Russian, is making a difference in the area. Any help at this time is a blessing. Right?

We learn that there is a special hero out there. John Murdock. He's an unknown anomaly in the large equation of what's happening in the world, as per the Seraphym who has visited him. The prophecies are gloom filled, but John might hold a flicker of hope. I enjoyed learning some of John's past. Yet, I want to know more! He's a bit different from all the others.

Things are getting deep and the characters are fully invested now. They are learning things that take them further than they ever imagined ~ more power, information and so much more. We learn more of Seraphym's rules and the infinite she speaks of.

Through each of these characters we are getting some answers. Or maybe more details that lead to deeper and narrower questions. I like this feel. The authors are leading me to conclusions.

This world has EVERYTHING! Science, superheroes, magic, mechanical's, ancient influences, creatures, and so much more. Epic world and story created here. One that keeps growing and shifting into place. This is a continuation of stories in a world in need of heroes, no matter how small. It's like watching a tv show each season. Some make it, others don't.

((I've learned that the podcasted books are divisions of the printed books as follows:

Printed book 1 is Invasion is podcasted seasons 1 & 2.

Printed book 2, World Divided, is podcasted seasons 3 & 4.

Season 5 podcast, Waiting On, is a bonus season - it's stories of characters between books 2 and 3.

Printed book 3, Revolutions, is podcasted seasons 6 & 7.

Printed book 4, Collision, is podcasted books 8 & 9 (season 8 in progress, season 9 yet to come).))

Scott Harris says

In this third part of the series, the author continues to unify her characters despite their inherent differences and reluctance to work together. She also introduces new villains to complicate the story and add more nuance to the story. Secrets begin to be unveiled as the characters learn what it means to rebuild their world, to work together (despite one another) and to overcome the challenges presented by their enemies. One of the lingering secrets of the series begins to be opened up here and promises to be developed in the future books.
