## Project Onyx John O'Riley

As a high level empath approaching senior year in high school, Brian struggles with his out of control talent that is causing constant psychic burnout and threatens his life. This becomes the very least of his problems when he's chosen for an illegal experiment and kidnapped by a group of merciless scientists intent on developing a retrovirus that can create the ultimate weapon in psychic ability. Brian's empathic talent warns him that his captors will kill him when they've concluded whether or not the injection has succeeded in giving him new psychic abilities. He knows he has only days to discover a way to escape before they end his life.

Unfortunately, there's another danger lying in wait. Someone close to Brian is an energy transference psi, commonly referred to as a psychic vampire, who has been stealing his energy for many years and is willing to murder him to keep the secret safe.
