What is a poor anatomist to do? Twenty pounds, wasted, up in smoke when the beautiful young woman his grave-robbing supplier brought awakens as he's inspecting her. If he's an ethical young doctor, there's only one choice; nurse the girl back to health and restore her to her family. That's when his troubles start. The woman can't remember anything. As his household nurses her and her memories return, their mutual attraction buds into a flowering passion. One of the things she has conveniently forgotten is her arranged engagement to the vulgar, but wealthy, son of a Northern industrialist. Even when the young man conveniently decamps with another woman, there's some deep dark secret about Dr. Craven that her father believes makes him ineligible. Resolving the resulting tangle in this sweet historical romance takes the combined efforts of the doctor's once profligate brother the Earl of Craven, a displaced French royal le Duc de Bourbon, and the visit of a mysterious French Baron to Almack's.

I think I was expecting something a little different, based on the title and the first 2-3 chapters of the book. But it never took the turn that I assumed. I felt like it could have definitely been more detailed, and not so rushed. The grammar/punctuation wasn't flawless, and it was sometimes difficult to know who was speaking. All the characters were lacking....emotion, depth. I was really excited about it at first, because I thought there would have been a more sci-fi or paranormal tone to it. I love the era and the cast of characters.

I enjoyed this book, though I thought the title was off-putting...

It is a combination of historical, romance and science fiction.

Curious Profession was a god book. I liked some of the characters. I wished I liked Cecelia though. I liked her in the beginning but once her memories started coming back she become a bit of a snob, but I am glad is finally got with Dr. Craven. Not for her sake but for his and those kids.
