**The War With Earth** Leo Frankowski , Dave Grossman

New Kashubia was a planet rich in heavy metals, but utterly lacking in carbon, oxygen, and hydrogen. Even dirt had to be imported at great expense. The colonists, moved there from Earth against their will, lived in tunnels drilled through solid gold but still were the poorest people in the universe. Since their only resource was people, they sent draftees out as mercenaries, fighting in tanks in symbiosis with a highly intelligent computer. And Mickolai Derdowski had fought bravely and brilliantly for nearly a decade, losing many friends in the process, and risen to the rank of General-he thought. But then he found out that it was all in virtual reality. The war had been faked, no one had died, and he was still just a tank commander, not a general at all. But New Kashubia had been well paid by the planet that had hired the mercenaries for the war they had faked, severe food rationing back home was no longer necessary, and people could now afford luxuries like homes and clothing. There was just one problem. A real war was looming on the horizon and this one couldn't be settled in cyberspace. A lot of people might get really, permanently killed. Such as Mickolai. . . .

Everything just fell together despite a ""setback"" early on.

Honestly, I don't really remember most of this book because I was so ticked that in the first chapter he turns around and ruins the first book for me, aarrggh! Seems like there are also hints that this is now a historical record because humans are extinct.

This book gets 0 out of five stars from me. If it were possible to have negative stars, it would. Godawful shit that I'm amazed was even published. If you see a copy on the shelves, run...

The War With Earth is classic style SF. I grew up on the likes of the Stainless Steel Rat, with a super competent main character (and often a loving wife) outwitting the rest of society. This story is right off that block, with main character being a Soldier in charge of a super battle tank that is powered with by a sentient AI. Working with his wife and other members of his command staff his team thwart both the public (by protecting the secrets of the Kabushian Expeditionary Force) and the Earth invaders.

Things come awfully easily to Mickolai. The opposition is shown as dreadfully incompetent (let's face it, competent can be a pain) and with the aid of the AI's very few things slow him and his team down for long. A neat part of this book is the concept of Dreamworld, where a user linked to the computer can experience things at multiples (17-30 times) real life. Makes basic training or even earning a PhD possible in very short time.

All in all a fun fast read.
