In 1903, a young woman dares to challenge the loggers on every slope of Georgia's forested mountains. Using America's first sustainable forestry principles promoted by the German forester at George Vanderbilt's Biltmore estate, she pushes forward this controversial approach to stop the timbering holocaust sweeping through Appalachia. Meanwhile, she must save the life of her baby who was born with a dangerous birth defect and protect her son from a desperate logger. Struggling to meet all challenges, Annaliese discovers new strengths that enable her to carve out a new path in male-dominated industry.

## **Jodi says**

Good quick read reflecting of strong women and other women that just want to get ahead by any means necessary. A little hooky in the simplicity of the story and ending but I like the idea of reading some about the lumbering era and the impact on the land. Additionally, reflecting upon those that wanted to save the land and the trees/animals upon it.
