### King AEvil says

A variety of puzzles and riddles with simple, but not easily divined, solutions from Martin Gardner, former "Mathematical Games" columnist for *Scientific American* (back when it was still very intellectual). Each puzzle is accompanied by both a short, direct explanation and more in-depth discussion generalizing the particular insight to other relevant problems and, in some cases, offering more challenging questions of the same form. Topics range from straight-up mathematics—arithmetic, geometry and number theory—to logic and even word games. These conundrums—and just as much, the abstract, seemingly childish yet sophisticated illustrations—delighted me as a child, though I was a bit young to appreciate their beauty and usefulness.

### Rob says

I hate math; yet I love this book.
